## REGIONVM CIVITATVM

aut quo rūmūq; locorū distantia  
arithmetice dimitiri.

### Primum documentum

**C**OGNITIS ex tabulis Ptolemæi amborum longitudine & latitudine locorum, animaduerte, an longitudine tñ, aut latitudine tñ, aut longitudine & latitudine simul discrepent, siquidem aliquo istorum modorum ea differre certum est. Si itaq; latitudine tñ differunt, hoc est, si vnius eorum sit altero aquilonior, sub uno tñ meridiano locenf, hoc pacto distantia eorum dognoscet. Subducta minore eorum latitudine a maiori, residuabis earum differentiam. Quam si per. 15. multiplicaueris, miliaria Germanica communia producentur. Eandem vero ducendo in. 12. Suenica quoq; miliaria se offerunt. At si tandem Italica miliaria te delectant, eandem differentiam sexagenario numero multiplicando, ea cognoscet. ¶ At si dictæ differentiæ latitudinum gradibus minuta aliqua adheserint, ea per. 4. partire, & exhibet numerus miliariorum Germanicorum prioribus addendorum. Quod habito, facile erit reliqua miliaria, Suevica videlicet vel Italica horum respectu dinumerare. Hæcum facilima videantur, exemplari calculo supersedendum duco.

Distantiam duorum locorum  
longitudine tantum differe  
rentium explorare.

### Secundum documentum

**V**OLENS taliū duorum locorum distantiam scire, considera eorum latitudinem, que si. 18. graduū metā non excedit, hoc est, q; nūsc̄ latius ab equatore deuiet, pari fere lege; vt cū differentiā latitudinū supra operatus es, & hic cum longitudinum differentiā, eandem multiplicando p. 15. 12. vel. 60. cuiusvis etiā generis miliaria dognoscet. ¶ Sed si horum locorum latitudo. dictam. 18. graduū limitem excederit, opus erit, differentiā longitudinū eorundem, per subtractionē minoris a maiori cognitā, in gradus equinoctialis cōuertere, ratione parallelorum ab æquatore evagantiū id exigēte. Cuius rei gratia tabula sequitur, Conuersionū videlicet graduū Lōgitudinū in gradus equinoctialis intitulatā, huic loco adaptandā duxi, quā eque breuitati atq; cōmoditati cōsulēdo, charactere. A. insignitā, eoq; nomine sepiuscule appellādam visum fuit. Rem igit̄ tētaturus, lōgitudinū differētiā, via iā dicta cognitā, in gradus equinoctialis cōuerte, hoc pacto. Latitudinē ambo bus locis cōmune in prima versus sinistrā linea huius tabule A quere, et minuta equinoctialis ē directo sub suis titulis apparetia extra scribe, secunda eadem cōcomitantia pro integrō minuto assumendo, si alicius momentu fore coniscere potes, vel missa faciendo

si exiguus corū numerus videat, puta nota bilitate citra vel ultra medietatē vnius minutū vel duarū tertiarū tc. Quibus habitis, differētiā lōgitudinū supra habitā p. eadē multiplicata, & pductū per. 60. partire, & exhibent gradiis æquinoctialis quesiti. Quos si per. 15. aut. 12. aut. 60. multiplicaueris, miliaria Germanica cōmunia, Suevica, aut Italica cōflabis, prout in superiori dogmate didicisti. ¶ Sed exemplari calculo hæc clariora fiant. Sint iccirco duo loca. A. & B. sub latitudine 50. gra. Quarū. A. habeat longitudinē. 30. gra. B. 30. 39. gra. & 15. minu. Harū differētiā, p. subtractionē minoris a maiori, elicio gra. 9. m. 15. quā duco in 58. m. ē directo. 50. gra. latitudinis occurrentia, non curando de. 9. secundis eis adiacentibus, vti nullius momenti existentibus, et produco minuta. 34. Et quia sub ea latitudine vni gradui latitudinis correspondent. m. 58. equinoctialis, vt sic tertia fere pars ablata, demo & tertia partē ad dictis. 15. minutis differentiæ longitudinali adherentibus, et relinquunt mihi. 10. m. que priori summe addendo, colligo. 55. m. quæ rursus per. 60. diuisa, gra. 5. m. 5. equinoctialis mihi exhibent. Duco itaq; gra. 5. in. 15. & produco miliaria Germanica cōmunia. 75. Minuta quoq; 5. diuido per. 4. & exēunt miliaria. 15. que superioribus accumulando, cohabito. 88. eiusdē generis miliaria, distantia videlicet iam dudu quesiā. Cetera facilia sunt ex p̄cedentibus.

¶ Distantiam duorum locorum lōgitudine et latitudine simul disperantū arithmetica supputatione addiscere.

**S**I D V O quelibet loca longitudine et latitudine differentia, parū ab æquatore, puta. 12. vel saltem citra. 18. gra. deuiauerint, differentiā longitudinū, vt supra, insuper & latitudinū elice differentiā. Quibus habitis, vtriusq; numerū quadratū ex tabula. B. iuxta titulorū indicia sume, quib⁹ in vna summā coaceruatis, totius aggregati ex eadē tabula modo conuerso scrutare radicē. Quā multiplicando per. 15. aut. 12. vel. 60. Germana miliaria cōmunia, Suevica, vel Italica singulis horum ductū numeris debita experieris.

¶ Q; si duo quēuis loca longitudine & latitudine disperantia, ampliori ab iniucem q; 18. gra. latitudine, puta. 20. 30. 40. vel amplius distiterint, & ita longitudo septētrionalioris loci sit arctior meridiano, opus erit latitudine quadā media, ambarū videlicet latitudinum simul iunctarū medietate, quā hoc loco Latitudinē medianam voco, cuius ope exta bula. A. minuta equinoctialis, eo modo, quo in p̄cedenti cū cōmuni locorū amborum latitudine operatus es, elicias, ac differētiā lōgitudinū modo supra dicto addiscendā, per eadē multiplicando, in gradus equino-

etialis conuertas, ut ibidem didicisti. Horum  
deinde graduum ex tabula. B. quadratum nu-  
merum inquire. Similiter & differentiae longi-  
tudinum ex eadem elice numerum quadratum.  
Quorum duorum quadratorum inuicem col-  
lectorum summa quere radicem quadratam ex  
eadem tabula, iuxta doctrinam pauloante tradi-  
tam. Quia radicem per. 15. 17. vel. 60. ut supra  
dictum est multiplica, & optato apprime pos-  
tieris. ¶ Exemplari calculo cautorē te reddā.  
Sint duo loca. A. & B. quarū A habeat lori-  
gitudinem. 20. gra. Latitudinē vero gra. 35.  
B vero habeat longitudinē 10. gra. Latitu-  
dinē 20. gra. 45. Differentia longitudinū  
est. 10. gra. Latitudinē 20. 12. Ambas igitur  
horum locorū latitudines simul iungo, &  
colligo gra. 98. quorū medietas est gra. 49.  
Latitudo videlicet media, quā quero in pri-  
ma versus sinistrā linea tabule. A. sub titulo  
Gra. lati. & e directo huius sub debitibz titulis  
39. m̄. æquinoctialis obuiātia extra scribo,  
secunda. 21. ibidem concurrentia, ob eorum  
exiguitatem missas faciendo. Eadē minuta  
duco in. 10. gra. differentiae longitudinū, &  
producuntur m̄. 390. quae partior in. 60. &  
exeunt gra. 6. m̄. 30. æquinoctialis. Quorum  
numerū quadratū in tabula. B. inuenio. 37.  
m̄. fere. Similiter differentiae latitudinū qua-  
dratū numerum ex eadē tabula elicio. 144.  
Hos duos numeros q̄adratos simul iungā,  
et colligo. 181. fere. Cuius radicem quadratā  
inuenio gra. 13. q̄s duco in. 15. & consequor  
195. miliaria Germana cōmunitia. Vel eosdē  
in. 12. duco, & elicio Sueuica miliaria. 156. At  
miliaria postremū Italica extorqueo. 780. si  
sexagenario ductu rem prosecutus fuero.

¶ Hæc vera sunt, cū longitudinū aut latitu-  
dinū gradibus nulle fractiones adiacent. Ve-  
rū si minuta quævis his adheserint, opus erit  
his sequentibus cautelis. Cū in vtracq̄ differ-  
entia habes æquales minorū summulas,  
puta vtricq̄. 20. 30. vel amplius, cuiuslibet ea-  
tundē summularū quadratum numerū in  
tabula. B. quere, & amborū numeros qua-  
dratorū in vnam summā collectorū, radicē  
quadratā econuerso in dicta tabula inuesti-  
ga, quam per. 4. partire, & exhibunt miliaria  
prioribus eiusdē generis addenda, & habes  
bis optatū p̄op̄e verum. Nec poteris ultra  
tertiā vnius gradus partē errare. Et hoc tūn,  
quando videlicet gradus longitudinū. 50.  
aut. 55. minuta, vñ quotlibet cōcomitantur,  
et gradibus latitudinū nulla adhereant, vel  
econtra. Si tñ curiose magis q̄ vtiliter singu-  
la quæq̄ minuta examissim explorare satis-  
gis, hoc pacto operare. Gradus differentiae  
longitudinum in minuta resolute, minutacq̄  
eisdē adherentia producto illi adde, et aggre-  
gatū duc in se, et quadratum inde productū  
serua. Eodem modo cū gradibus et minutis

differentiae latitudinū age, numerū videlicet  
quadratum inuestigādo. Hos deinde duos  
quadratorū numeros inuicē iunge, & quod  
inde conflatum fuerit, per. 60. partire, & pdi-  
bunt minuta, que si rursus eodē sexagenario  
partitus fueris, emerget numerus graduū,  
qui ex ductu differentie longitudinū in illā  
latitudinū producuntur. Cuius radix pro-  
positum rite absoluēt.

¶ Et quia nonnunq̄ numerus quadratus,  
vel summa, cuius radicem, vel econtra radix  
cuius quadratum numerum querere iube-  
mur, in tabula non est expressa, opere preciū  
duxī cautiunculam huic negotiō congruam  
assignare. Cum igitur radicem quæsitus,  
numerum tuum propositū in tabula mini-  
me reperis, proximi minoris ibidem apparē-  
tis radicem cape, differentiāq̄ lateralē duorū  
numerorum, quorum unus a numero tuo  
proposito exceditur, alter vero eundem exces-  
dit, extra scribe, & serua. Deinde subtrahie nu-  
merū tuum a proximo maiori, & residuum  
cōfer ad differentiā lateralē supra seruatam,  
et secundum proportionem huius ad illam  
adde minuta radici inuente, & habebis radi-  
cem optatam. ¶ Sit exempli causa proposi-  
tus mihi numerus, cuius radicem quadratā  
inuestigare iubeor. 1333. quē cū in tabula mi-  
nime apparere animaduerto, accipio. 36. radi-  
cem proxime minoris numeri ibidem appa-  
rentis, scilicet. 1296. cuius & proxime maioris  
differentiam lateralē. 75. extra scribendo ser-  
uo, atq̄ deinde numerum meū propositum  
a proximo maiori demo, et residuū. 36. vide  
licet ad differentiam lateralē supra seruatam  
confero: qui cum duplus fere ad illā existit,  
medietatem igitur gradus integri. 50. scilicet  
minuta, radici prius nacte adiūcio, & colligo  
gradus. 36. m̄. 36. quod fuit propositum.

¶ Q̄ si demū tabulam hanc ampliare libue-  
rit, vbi res postulat, id facile efficies, si bina-  
rium numerum vltimæ laterali differentiae  
semper accumulas, et erit differentia lateralē  
immediate sequēs, que si numero quadrato  
immediate precedenti additur, numerū iure  
proxime sequentem locum obtenturū con-  
flabis, & sic ad libitum vltra vel ad infinitū  
vscq̄ procedere licebit.

¶ Tabula conuerzionum graduū extra equis noctialem in gradus equinoctialis.

# PRINCIPIVM EVROPAE

Hę sunt e cognitis totius orbis Prouincijs seu Prefecturis  
quas prima Europe tabula complectitur.

Hybernia Insula Britannica.  
Albion Insula Britannica.

## Tabula. I. Europae.

**D**RIMA Europe tabula Britannicas continet insulas, cum adiacētibus ei insulis. Parallelus ḡo ei⁹ medius, rationē habet ad meridiānū, quā vndeclī fere ad viginti. Circumscribitur autē tabula vndiqz Oceano. Ab ortu Germanico. A meridie Britānico, & eo qui appellatur Vergiueus. Ab occasu Occidentali. Ab septētrionibus vero Hyperboreo, et qui vocatur Duecallidonus. Thyle igit̄ insula maximam diem habet horarū equinoctialiū 20. Distatqz ab Alexandria, occasum versus, horis duabus.

Hybernię vero Insulę Ciuitates insignes.

Eiusdem nominis, cuius & insula ciuitas Hybernis, maximā diem habet hor. 18. Distatqz ab Alexandria, occasum versus, horis. 3. &  $\frac{1}{4}$ .

Rheba ḡo maximā diē habet ho. 18  $\frac{1}{2}$ . Et distat ab Alexandria, versus occasum, hor. 3. quinta vna.

Albionis vero Insule.

Londiniū maximā diē habet hor. 17. Distatqz ab Alexandria, occasum versus, hor. 2  $\frac{3}{4}$ .

Caturaconium maximā diem habet hor. 18. Et distat ab Alexandria versus occasum hor. 2  $\frac{2}{3}$ .

Alata castra maximam diem habent ho. 18  $\frac{1}{2}$ . Distatqz ab Alexandria, occasum versus, hor. 2  $\frac{1}{2}$ .

Dumna autē insula maximam diem habet hor. 19  $\frac{1}{2}$ . Ac distat ab Alexandria versus occasum hor. 2.

Vectis vero insula maximā diem habet hor. 16  $\frac{2}{3}$ . Distatqz ab Alexandria versus occasum hor. 2  $\frac{2}{3}$  fere.

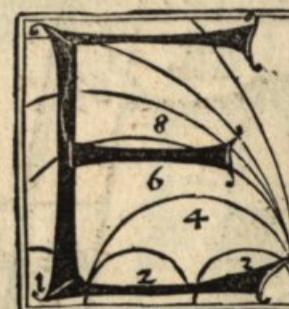

Prima igitur Europe tabula cōtinet longitudinē a partibus 7  $\frac{2}{3}$ . vscqz ad partes. 33. Fitqz Lōgitudo partiū 25  $\frac{1}{2}$ . Latitudo ḡo cōtinet a partibus 51  $\frac{1}{2}$ . vscqz ad. 63. Ita vt Latitudo fiat partium. 11  $\frac{1}{2}$ .

# TABV. I. EVRO.

VROPA appellata est ab Agenoris, Phoenicū regis filia, quę a Ioue ex Aphrica rapta, in Cretā abducta fuit. Terra multiformis, & ad viorum virtutem ingenue disposita, ciuiūq; et domesticarū ad alios rerū transfusiua. Est enī tota habitabilē, in exigua tñmodo parte, ppter frigoris vim inhabitabilē. Quę finitima Tanaidis & Mætidis incolis, Borystenensibusq; in curribus degentibus. Habitabilis aut̄ regionis, id quod algidum est & montanū, laboriose habitatur. Curatores aut probos luscipietia loca etiā prae habitata, et per latrocinia, mitigant. Quę admodum obtinentes Greci, montes, petrasq; incoluerūt pulchre, ob prouidentiam circa ciuilia, artesq; et reliquū ad uitam sensum. Quantū autē Europe in plano est, natu raleq; temperiem habet

## DE ANGLIA.

ANGLIA, quę & Britānia ab eruditis dicit, insignis in Oceano Insula triangulari forma Siciliæ similis, quę et quondā ab albis rupibus, quę ad eā nauigantib; primo apparent, Albion dicebatur. Troes eam quandoq; incoluerūt, qui Troia a Grecis vastata, Palladis oraculo, digressi classe, in hanc insulā venerūt, atcq; Gigantes tunc eam incolentes, multis prelijs victos, expulerut. Hos yō et ipsos post multos annos Saxones, illustris Germaniq; popl's, Angelæ reginæ auspicio expulerunt, et agros opesq; insulanorū inter se partientes, vt linguae pariter & gentis memoria, indeuicta Insula sempiterna foret, ab Angela ductrice sua, terrā illam Angliam dixerunt, q̄uis pleriq; sic appellatam putet, quasi nostri orbis angulu. Ambitus eius quadragieslocties & septuagintaquinq; milib; pas suū cōstat. Sunt Angli ceruleis oculis, facie adeo venusta, et statura procula, vt beatissimus Gregorius, cū forte Anglorū pueros Rome videret, Bene inquit bene Angeli dicuntur, quia vultu nitent vt angelī, oportet illis iter salutis æternæ administrare. In bello sunt intrepidi, optimiq; sagittarij. Foemine candore & forma insigni.

## DE HYBERNIA.

HYBERNIA Insula inter Septentrionē & Occidentē solē, dimidio minor q̄ Britānia, cui propinq; est, ab Hyberno tempore (vt quidā putat) appellata. Adeo pabulosa est, vt ibi pecuaria (nisi æstate a pastibus arcean tur) in periculū agat saties. Nullū noxiū animal gignit, non araneam, non ranam, nec alit aliunde inuestam. Oīa noxia aīalia ab alio asportata solo, pulueri iniecta necat. Apes in ea nō reperiuntur, mira coeli tempesties, fertilitas insignis. Gens tamen inhospita, inculta, & crudelis. Sangue interemptorū hausto prius victores deturpant. Fas atcq; nefas eodē omnia ducunt. Puerpera si quando marē edidit, primos cibos gladio imponit mariti, inq; os paruuli summo mucrone, auspicio alimentorū leniter infert, et gentilibus votis optat, non aliter, q̄ si in bello & inter arma mortem obeat. Qui cultui student, dentibus mari narum beluarum insigniū, ensium capulos exornat, canedrant enim ad eburneā claritatem.

# TABVLA II. EVROPAE.

Ita vt Latitudo fiat partiū 10  $\frac{1}{2}$   $\frac{1}{4}$ .

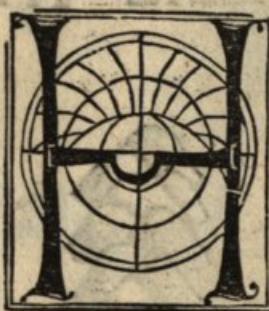

## TABVLA. II. EVRO.

ET PRIMO DE HISPANIA.

ISPANIA MAXIMA Europe regio, terris optimis cōparanda, nul lis posthabēda, frugū copia, siue soli vbertatē, siue vinearum prouentus, siue arborarios respicere velis: omni materia affluit, quęcunq; aut precio chara esse possit, aut usu necessaria, adeo, vt non ipſis incolis tñ, verum etiam Italię, vrbiq; Romę, ad cunctarū rerum abundantiam sufficiat. Argentū, gemmas, & aurū, si requiras, habet. Ferrarijs nunq; deficit, nec cedit vitibus, vincit oleis, nihil ociosum in ea, nihil sterile. Non coquunt ibi sales, sed effodiūt. Non violento sole torretur, vt Aphrica, neq; assiduis ventis, vt Gallia fatigāt, Salubritas coeli p omnē regionem equalis. Nulla paludum graui nebula inficit, sed marina aura perflatur. Lini, sparicq; in ea yis ingens, minij certe nulla feracior terra. Cursus amniū, non torrentes, rapid ieq; vt noceant, sed lenes, & vineis campisq; irrigui, estuarīscq; oceanī affatī piscoſi. In nulla tñ re magis olim cōdemnata est, q; equorū perniciate, quos ibi a vēto concipi, memorię proditū est. Fuit olim tota Hispanię terra (vt nihil obmittatur, quod ad regionis cognitionē attinere cognoscitur) diuisa, in vltiorem & citeriorem Hispanias. Citerior eadē, que Tarragonensis ad Pyreneas vscq; iuga protendit. Vltior in duas, per longitudinē prouintias diuidit. In Bethicam & Lusitanā. Superioribus annis Hispania in regna quincq; diuisa est, scilicet, in Castelle, Arragonū, Portugalię, Nauarre & Granate.

### DE LVSITANIA.

LVSITANIA que & hodie Portugalia appellatur, populos habet Hispanię fortissimos, scrutatores insidiosos, veloces, agiles, atq; versatiles. Scutis duū pedum latitudine vtuntur curuis, ad anteriora spectantibus, quibus neq; fibula, nec ansa villa est, his in bello ea agilitate vtuntur, vt & ictus, & sagittas euitent. Gladiolus aut pugio lateri adheret. Plurimi lineos thoraces habent: perpauci loricis vtuntur, aut cristatis cassidibus. nonnulli neruatis galeis. Iaculum longe iaciunt, & summa arte, in acie diuitius pseuerant. Mobili corpore, leuicq; vt facile et fugiant hostem, & inseguantur.
