

Kew, July 16. 83

My dear Sir,

The Apocynacea from

S. Thomas is a Taberna-

montana near to T.

subsessilis, Bth. Bot.

Oliver, however, thinks

it is a new species. It

also comes near F.

crassa.

The Ficus is not  
distinguishable from

F. Vogelii

Both plants are  
likely to give canthons

If you would send  
us a list of the  
Economic plants you  
want we would  
see what we could  
do to help you

Yours faithfully

W. T. Thirsk Dyer
